Intraday Strategies and Technical Indicators

Course Topics | A concise overview of common intraday analysis methods.

1. Price Action Setups

- Opening range and opening-range breakout concepts
- Breakout, pullback and retest setups
- Trend continuation and range-bound market setups

2. Common Indicators

- VWAP and its role in intraday analysis
- Moving averages (SMA and EMA)
- RSI and MACD basics

3. Volume and Momentum

- Reading volume expansion and contraction
- Momentum confirmation
- Recognising weak breakouts and possible reversals

4. Multiple Timeframe Context

- Using higher timeframes to identify key levels
- Using intraday charts to plan a setup
- Avoiding conflicting signals

5. Strategy Testing

- Defining entry and exit rules
- Recording sample trades
- Comparing results across different market conditions

Educational material only. Intraday trading involves substantial risk and may result in rapid losses. This outline is not a recommendation to buy or sell any security, and daily profits are not guaranteed.
